SUPERIOR UNIVERSITY

ASSEMBLY LANGUAGE — LAB #01

Student Name: Muhammad Adnan Rasheed

Course: Assembly Language

Lab Number: 01

Instructor: Muhammad Hamza

Task 1: Install EMU8086

Install the EMU8086 emulator on your computer.

Task 2: Open EMU8086

Open the EMU8086 application on your computer.

Task 3: Simple Program Using MOV Instruction

Program:

```
.MODEL SMALL
.STACK 100H
.CODE
MAIN PROC
    MOV AX, 5
    MOV BX, AX
    MOV AH, 4CH
    INT 21H
MAIN ENDP
END MAIN
```

Explanation

MOV AX, 5 stores the value 5 in register AX. MOV BX, AX copies the value in AX to register BX. MOV AH, 4CH and INT 21H terminate the program in EMU8086.

Expected Register Values

Before the termination instructions execute, AX contains 0005H and BX contains 0005H.

Conclusion

In this lab, a simple 8086 assembly language program was written to practice the MOV instruction and transfer a value between registers.
